

# Combination Layouts

The file layouts in this section are to be used in one of two situations in a Combination EDEExpress/Institution System:

- 1 Importing data from another institutional system into the EDEExpress database to create loan origination records (DIEA99OP) or make changes to loan origination records (DIEC99OP); *or*
- 2 Exporting useful data from the EDEExpress system to be used by other institutional systems such as cash records (DEEC99IN) or disbursement and loan origination data (DEER99IN). The user may use file formats and user-defined queries from within EDEExpress to select the desired fields and specific records for exporting. See on-line help in EDEExpress for details on how to create queries and file formats.

Since each institutional system has unique requirements for importing data files, the export files created by EDEExpress for use by external systems are created without header or trailer records attached. If needed, the appropriate header or trailer records must be created by the institutional system upon import. Also, these export files are created in ASCII format and the end of each record is delineated or marked with carriage return/line feed characters (ASCII 10 and 13). There is no end of file marker (EOF), only the final carriage return/line feed marker after the last record.

Similarly, EDEExpress receives data from external systems without a header and trailer record but does require an ASCII format with the end of each record marked with carriage return/line feed characters (ASCII 10 and 13). Again, there is no end of file marker (EOF), only the final carriage return/line feed marker after the last record.

---

**Note:** If the file is incorrectly formatted without the carriage return/line feed, the import will fail and the following error message will be displayed: *invalid record length EDEExpress expecting.* (You will be given the record size of the import file.).

---

		Total Bytes	<b>82</b>			

## External Export Record Layouts

The user may define their own file layouts and queries from within EDEExpress to select the desired fields and specific records for exporting.

The following layouts are samples as if the user selected “All Fields” when creating a file format (layout). The file layouts are applied by selecting a file format code when the user selects an Export type of ‘Disbursement External,’ ‘Origination External,’ or ‘Origination External’ (PLUS only). In these cases the message classes are the same (DEER99IN). To narrow or select a specific set of records, the user may also use a query in combination with the user defined file layout.

The export process pulls the records from the associated database and resets the export to external flag to “N” to indicate this record has been exported for use in an external system.

### **DEER99IN** **Disbursement External – Actual Disbursements**

Field #	Start Position	End Position	Field Length	Field Name	Valid Field Content	Justify
1	1	21	21	Loan Identifier	Student's Social Security Number: 001010001 - 999999999 Loan Type: S = Subsidized U = Unsubsidized P = PLUS Loan Year: 99 School Code: X00000 - X99999 where X = G or E Loan Sequence Number: 001 - 999	Left
